PROFESSIONAL SUMMARY

Data Scientist specializing in machine learning on large, high-stakes datasets. Built and deployed classification models on 366,000+ records with documented fairness and bias auditing (SHAP), model monitoring, and threshold optimization for critical-case recall. Experienced in translating model outputs into clear reporting for non-technical stakeholders. Completing SAIT's Integrated AI post-diploma certificate (Aug 2026); eligible for full-time work under a Post-Graduation Work Permit.

TECHNICAL SKILLS

Languages & Query: Python, SQL (PostgreSQL, SQLite), R (foundational), JavaScript

ML & Statistics: scikit-learn, LightGBM, XGBoost, TensorFlow/Keras, BERT/NLP, statistical modeling, classification (GLM-family: logistic regression), feature engineering, class imbalance handling, threshold optimization

Fairness & MLOps: SHAP explainability, bias/fairness auditing, MLflow, Evidently AI (drift detection), Great Expectations (data quality)

Visualization & Reporting: Power BI (foundational), Matplotlib, Seaborn, Streamlit dashboards, technical report writing

Deployment & Tools: FastAPI, Flask, REST APIs, PostgreSQL, Docker basics, Git/GitHub, Render, CI/CD

TECHNICAL PROJECTS

SympDirect — AI-Assisted Emergency Triage Classifier (*Backend & DevOps Lead*) Capstone with ClaireDre Inc. | 2026

- Built a multi-class clinical triage classifier on 366,000+ patient records with 972 features; achieved ~84% accuracy and 95% recall on critical cases using LightGBM with decision-threshold optimization.
- Conducted SHAP-based fairness and bias auditing to detect proxy discrimination in model predictions — directly applicable to evaluating pricing models for regulatory compliance.
- Engineered NLP pipeline reconstructing symptom text from binary clinical flags; trained a custom WordPiece tokenizer for downstream BERT-based modeling.
- Owned backend architecture and DevOps: reproducible training pipelines, experiment tracking with MLflow, and data-quality validation.

EmergeAI Healthcare — Deployed ML Triage System github.com/AnujPatel089 | 2026

- Designed and deployed a production ML system: XGBoost severity classifier served through a FastAPI backend with a Streamlit front end and PostgreSQL database, hosted on Render.
- Diagnosed and resolved a production null-prediction failure caused by ephemeral filesystem storage and feature-column mismatch; implemented a rule-based fallback for service reliability.

Predictive Customer Analytics System Python, scikit-learn, SQL | 2025

- Built an end-to-end churn prediction pipeline (logistic regression, random forest) reaching 85%+ accuracy; EDA on 50,000+ records with 15+ engineered features improving performance by 12%.
- Automated SQL aggregation of raw transactional data and stakeholder reporting with Pandas/Matplotlib dashboards.

EDUCATION

Post-Diploma Certificate, Integrated Artificial Intelligence — SAIT Calgary, AB | Jan – Aug 2026

- Coursework: statistics, predictive modeling, MLOps, NLP, computer vision, AI ethics & governance, human-centered AI.

Diploma, Full Stack Web Development — MacEwan University Edmonton, AB | Jan 2025 – Dec 2025

Bachelor of Engineering — Sardar Patel College of Engineering India | Aug 2019 – May 2023

WORK EXPERIENCE

Team Member — Redswan Pizza Calgary, AB | Apr 2026 – Present

- Prepare and fulfill high-volume food orders during peak hours while maintaining food safety and quality standards.

Store Associate — Dollarama Calgary, AB | Oct 2025 – Apr 2026

- Processed 200+ daily transactions with zero cash-handling discrepancies over 7 months; relayed inventory trends and customer feedback to management to support data-driven stock decisions.

Merchandiser — Costco Wholesale Garden Centre Edmonton, AB | Apr – Jun 2025
